Description			
array_walk with intval function as callback throws a warning because of too many parameters. array_walk always sends key and value to the callback function. See http://php.net/manual/en/function.array-walk.php (second note)

[BUGFIX] Prevent warning in FAL "Update storage index" scheduler task

Due to the use of intval within array_walk a warning is triggered, because array_walk calls the function with two parameters where intval only expects one. This patch replaces the array_walk function with DatabaseConnection::cleanIntArray.
