Target version:		PHP Version:	
TYPO3 Version:	6.2		

Description

You name that problem, but you give no solution: placing a htaccess file in this directory is no good solution, because it is often necessary to delete the whole typo3temp directory.

Perhaps you could offer an option in extension manager configuration to disable the PDF export.
Or you could check, whether this directory is protected, when a PDF export is executed. And, if it's not protected, automatically create a htaccess file.

History

#1 - 2015-07-04 20:47 - Nadine Schwingler

- Status changed from New to Accepted
- Assignee set to Nadine Schwingler

With next TER update, the following will be implemented:

during PDF-creation the typo3temp/ke_questionnaire folder and the typo3temp/ke_questionnaire/pdf folder will be updated with an .htaccess file if needed

#2 - 2015-07-20 10:01 - Nadine Schwingler

- Status changed from Accepted to Closed
