Target version:	1.0 alpha 14			
PHP Version:			**Complexity:**	
Has patch:				

Description

Resources are basically objects that can be secured by model security (see #6604). We'll have to find a solution how secured files have to be handled by the resource manager.

One possiblity would be:

We have a special virtual folder named after the secure session key that holds symlinks to all resources the current user is allowed to access. We could also add a dynamic rewrite rule that restricts access to this folder to the IP of this user. The folder would have to "expire" with the user session.
