Revision b194486e - 2015-04-20 14:18 - Helmut Hummel

[BUGFIX] Remove unnecessary and failing code

While fixing #57199 a slot was introduced to write the class cache after each extension installation. This not only adds unnecessary overhead as the class loader already holds the class loading information of activated packages in runtime cache, it currently causes fatal errors in certain situations, as the class cache is also removed after each extension installation **and** runtime information is flushed in the slot.

Removing the slot increases stability and performance for extension installation process.

Resolves: #66487

Releases: 6.2, master
