#### Description

pageTSConfig:

wizardItems.[group].elements.[name].icon is defined as image resource. It is possible to either set it via PHP like here: <http://docs.typo3.org/typo3cms/CoreApiReference/ApiOverview/Examples/ContentElementWizard/Index.html> with ExtensionManagementUtility::extRelPath or make the path relative with ../../typo3conf/ext/myextension but using EXT:myextension is not working.

Example which **should** work:

```
mod.wizards {
    newContentElement.wizardItems {
        special {
            elements {
                worldmap {
                    icon = EXT:contentelements/Resources/Public/Images/worldmap.gif
                    ...
                }
            }
        }
        show = *
    }
}
```

#### History

##### #1 - 2015-04-21 22:37 - Simon Schaufelberger

here is the class: TYPO3\CMS\Backend\Controller\ContentElement\NewContentElementController Line 221 where it is used.

```
<img' . IconUtility::skinImg($this->doc->backPath, $wInfo['icon'], '') . ' alt="" />
```
