Description			
Hello,			
<pre>page = PAGE page.10 = CONTENT page.10.[autocomplete opens]</pre>			
Now push cursor key "right". Now you can move around with all cursor keys in your TS while autocomplete is still open. If you choose an entry with mouse, the selection will be inserted at current text-cursor position.

Which browser do you use? I can't confirm this in Chrome 43.0.2357.134.

- Status changed from Needs Feedback to Closed

Hello Andreas,

I have closed this issue. This problem seems to be solved with one of your other patches.

Thank you

Stefan
