Description

Hello,

after BE login timeout the "Refresh Login to TYPO3 (User: froemken)" message appears. But it is not possible to relogin again. After some seconds a red message appear on the right side:

Login failed. Password not correct.

I have entered my password multiple time. I'm sure it is correct.

After changing the URL to the BE-Login I can login without any problems.

Stefan

History

#1 - 2015-07-27 12:31 - Frank Naegler

I think the problem is the moduleToken change, not verified yet, but we have some trouble since this change.

#2 - 2015-07-27 12:38 - Frank Naegler

Can't verify the problem, tested with FF and Chrome and 15 seconds session timeout.

#3 - 2015-07-27 12:45 - Stefan Froemken

Additional Information: OpenId is NOT activated

#4 - 2015-07-27 13:06 - Stefan Froemken

For your information:

I have set the BE-login timeout to 30 seconds. If you now constantly navigate through the Backend you will be logged out directly after 30 seconds. Seems that the timeout was not resetted to 0 with each request.

Are you sure browser caches are empty, there was a change for ext:rsaauth that rewrote the JS part...

I cannot reproduce it here

#6 - 2015-07-27 15:57 - Markus Klein

There is a JS error in the "checkActiveSession" part.
The AJAX response does not report the "locked" state of the BE.

Will be fixed with [#68554](#)

- Status changed from New to Needs Feedback

Please try with current master.

#8 - 2015-07-27 19:09 - Stefan Froemken

Ahh, there is an internal timer of 120 seconds. That's why it does not make sense to test with 15 or 30 seconds in Installtool for BE-timeout. I just have tested with 150 seconds and that looks much more stable. So, that issue can be closed now.

- Status changed from Needs Feedback to Closed

thanks Stefan, closed now.
