#### Description

Right now AbstractPlugin::pi\_loadLL looks for hardcoded language.xml file in the script directory "scriptRelPath".

```
'EXT:' . $this->extKey . '/' . dirname($this->scriptRelPath) . '/locallang.xmlf';
```

This doesn't allow to use Extbase like structure for pi-based extensions (placing language lables in Resources/Private/Language

In few places in the core, we still keep scriptRelPath containing wrong value (script location and name has already changed during namespace change). And the only reason for it is that we need this property for loading language files.

The solution would be to make AbstractPlugin::pi\_loadLL take an optional argument pointing to the correct loaction of the language file.

##### Revision 4dd593e4 - 2015-09-01 10:29 - Tymoteusz Motylewski

[FEATURE] Allow AbstractPlugin::pi\_loadLL to load custom language file

Add optional parameter to pi\_loadLL method to allow loading language files located somewhere else than \$this->scriptRelPath folder. This change allows to place language files in Resources/Private/Language also in pi-based plugins.

Resolves: #69416

Releases: master
