Description The SelectTreeElement currently still does the data item calculation on its own. This should be extracted to an own data provider, probably called after TcaSelectItems / TcaSelectValues provider. Goal is that the tree element does not fetch the to-render elements on its own anymore, but instead that should be prepared by an own provider. To all this \$treeDataProvider stuff should vanish from the render element. There may be parts - especially the addItems tsConfig stuff that is already resolved within TcaSelectItems provider, so it might be a good idea to extract the according method(s) to an abstract, so both provider classes can use it. Additionally, TcaSelectItems need to be changed to not handle renderMode=tree elements.

Revision c5ee13f0 - 2015-10-29 13:07 - Morton Jonuschat

[TASK] FormEngine: Move SelectTree processing into a data provider

The handling of select form elements with renderType "selectTree" has been cleanly separated into a dedicated pair of element renderer and data provider.

Methods used by the default select item provider as well as the tree item provider have been moved into the AbstractItemProvider, the usage of the AbstractItemProvider class has been cleaned up and is now limited to data providers that deal with items.

Preparing the javascript for the tree rendering has been moved into a dedicated method in the SelectTreeElement.

TcaSelectTreeItemsTest only covers the special data parsing/preparation needed for the tree display, all common test cases for select item handling are covered in TcaSelectItemsTest which covers the methods provided by AbstractItemProvider.
