

TYPO3 Core - Bug #70074

After saving tt_content, always jumps to top

Description

IS: When I save a tt_content element and close it, the viewport always jumps to the top of the page in the backend.
SHOULD: It should jump to the element I just edited or created.

This is the same for save and view tt_content, it could use the anchor like #c9182 to jump to the element in the frontend side.

This would make it easier to edit and check content in the backend..

However I have the feeling this feature was there in the past but vanished in 6.2...

[BUGFIX] Return to content element after closing

When editing a content element in the page module and (saving and) closing it the view will now jump back to the content element.
This is especially useful for pages with a lot of content.

Resolves: #70074

History

#1 - 2015-09-24 13:46 - Michael Fritz

Actually it takes a lot of time for editors to scroll to the part again, where they edited the last time..

#2 - 2015-11-04 21:41 - Rafal Brzeski

best solution would be an ajax request, but this is I think an epic issue for future release :)

#3 - 2015-11-18 17:16 - Ben Robinson

It works if i open the element via pencil. If i open it by clicking on the text, it does not scroll down.

#4 - 2016-04-08 14:42 - Michael Fritz

?Ajax-Request?

Best solution would be to add an anchor to the preview link for instance:

website.de/?id=123#Anchor1

Then all I had to do is add anchors to all my tt_content elements, which I do anyways..

And I remember it worked some years ago..

#5 - 2016-04-11 20:06 - Christoph Bessei

It would be really nice if this could be fixed/implemented.

As Michael said it would save the editors a lot of time.

#6 - 2016-07-19 16:33 - KJ Kooistra

I've seen this work just fine in 6.2. Are you using gridelements by any chance? Because it doesn't work with nested gridelements:

<https://forge.typo3.org/issues/73093>

It doesn't work anymore in TYPO3 7.6 though. I got it fixed by updating TYPO3\CMS\Backend\View\PageLayoutView::tt_content_drawHeader() and changing line 1399 to:

```
'returnUrl' => GeneralUtility::getIndpEnv('REQUEST_URI') . '#element-tt_content-' . $row['uid']
```

However I'm not sure if this is a good way to fix it.

Hi,

in the same id, I add the same param in the function linkEditContent (line 1895 for typo3 7.6.16)

```
public function linkEditContent($str, $row)
[...]
```

```
        'returnUrl' => GeneralUtility::getIndpEnv('REQUEST_URI') . '#element-tt_content-' . $row['uid']
]
```

```
[...]
```

```
}
```

Without that the right callback url is written only on header and not when we click on the bodytext.

Thanks for including

#13 - 2017-03-02 11:36 - S. G.

as well on hiding and unhiding (line: 1399 for typo3 7.6.16) :

```
public function tt_content_drawHeader($row, $space = 0, $disableMoveAndNewButtons = false, $langMode = false,
$dragDropEnabled = false)
{
[...]
```

```
        if ($hiddenField && $GLOBALS['TCA']['tt_content']['columns'][$hiddenField]
            && (!$GLOBALS['TCA']['tt_content']['columns'][$hiddenField]['exclude']
                || $this->getBackendUser()->check('non_exclude_fields', 'tt_content:' . $hiddenField))
        ) {
            if ($row[$hiddenField]) {
                $value = 0;
                $label = 'unHide';
            } else {
                $value = 1;
                $label = 'hide';
            }
            $params = '&data[tt_content][' . ($row['_ORIG_uid'] ? $row['_ORIG_uid'] : $row['uid'])
                . '][' . $hiddenField . ']=' . $value;
            $out .= '<a class="btn btn-default" href="' . htmlspecialchars(BackendUtility::getLinkToDa
taHandlerAction($params))
                . '" title="' . $this->getLanguageService()->getLL($label, true) . '">'
                . $this->iconFactory->getIcon('actions-edit-' . strtolower($label), Icon::SIZE_SMALL)-
>render() . '</a>';
        }
[...]
```

```
}
```

thanks
