

TYPO3.Flow - Feature #71

Add Validators for generic base types

2007-12-07 12:39 - Robert Lemke

Assignee:	Andreas Förthner	% Done:	100%
Category:	Validation	Estimated time:	0.00 hour
Target version:		Complexity:	
PHP Version:			
Has patch:			

Description

The framework should provide a few validators which can handle basic types such as:

- Text (ie. text without control characters. Question is if HTML would be a valid text?)
- Float
- Number
- NumberRange
- Integer
- EmailAddress
- NotEmpty
- RegularExpression

(Maybe create tickets for each of them)

Always make sure to be clear about the difference between filter and validator.

Associated revisions

Revision cf097610 - 2008-04-16 17:36 - Andreas Förthner

This is all work in progress, but a big part of the Validation/Property Package is already finished:

- Implemented the basic Validation Framework. This fixes #65, #67, #68, #70
- Implemented some base validators. This fixes #71
- Implemented a basic Framwework for PropertyEditors

Revision 726 - 2008-04-16 17:36 - Andreas Förthner

This is all work in progress, but a big part of the Validation/Property Package is already finished:

- Implemented the basic Validation Framework. This fixes #65, #67, #68, #70
- Implemented some base validators. This fixes #71
- Implemented a basic Framwework for PropertyEditors

History

#1 - 2008-01-08 19:56 - Malte Jansen

This one should be missed:

- Alphanumeric

Pretty useful for hashes or other identifications.

Perhaps some of the validators are pretty useful for a direct check of Arguments...

e.g.

```
$this->arguments->addNewArgument('packageKey', 'alphanumeric');
```
