Description	
I have installed flux 7.1.2 and the corresponding fluidpages, fluidcontent ... Since the release of flux 7.3.0 I'm getting the error "flux was requested to be downloaded in different versions (7.2.3 and 7.3.0)" The error can be reproduced with only flux 7.1.2 and fluidpages 3.1.2. No other extensions installed. After deleting flux 7.3.0 in tx_extensionmanager_domain_model_extension everything works

History

#1 - 2015-12-08 19:56 - Riccardo De Contardi

I've got the same error on 6.2.15

#2 - 2015-12-08 22:08 - Andreas Fernandez

- Status changed from New to Needs Feedback

Can you please check whether there is a conflict in those extensions depending on flux? It looks to me one ext requires flux 7.3.0 and another ext requires flux 7.2.3.

#3 - 2015-12-08 22:39 - Stephan Bauer

Hello Andreas,

maybe it was not clear what I wrote. I could reproduce this problem with only flux 7.1.2 and fluidpages 3.1.2 and no other extensions installed. fluidpages 3.1.2 has the dependency 'flux' => '7.1.0-7.1.99',

#4 - 2015-12-09 11:39 - Andreas Bouche

A customer of ours gets the same error concerning powermail 2.1.17 and 2.19.0, also on TYPO3 6.2.15.

#5 - 2015-12-09 14:46 - Arne-Kolja Bachstein

Maybe a problem in the repository?

I am getting the exactly same error on an upgrade from 6.1 to 6.2.15, without any updates of extensions. Occurs after updating the repo infos, not after changing extensions.

For testing purposes I removed the newest entries of flux from tx_extensionmanager_domain_model_extension and it works again.

Maybe a problem with the upload of the latest flux update?

#6 - 2015-12-09 15:21 - swanage no-lastname-given

I can confirm this error.

It happened to me in 6.2.15 just after updating repo info.

#7 - 2015-12-18 09:27 - Jozef Spisiak

I can confirm same error, also went through all ext_emconf and only lines with flux we have are these:

```
'flux' => '7.1.0-7.1.99',  
'flux' => ",
```

we are running 7.1.0 flux right now.

#8 - 2015-12-18 10:32 - Stephan Bauer

It seems to be fixed in 6.2.16

#9 - 2016-01-16 11:21 - Morton Jonuschat

- *Status changed from Needs Feedback to Closed*

- *Target version deleted (6.2.16)*

As the problem was fixed for the issue creator and no one else said anything different I'll close this one.

If you think that this is the wrong decision or experience this issue again, then please write to the mailing list typo3.teams.bugs with issue number and an explanation or open a new ticket and add a relation to this ticket number.

#10 - 2016-05-18 17:00 - Marc Blasig

We got a similar problem today: flux was requested to be downloaded in different versions (7.3.0 and 7.4.0).

Clearing tx_extensionmanager_domain_model_extension fixed the fatal error but also results in not being able to fetch from TER anymore.

Flux Version is 7.2.3, any ideas?

#11 - 2016-06-22 12:39 - Marc Willmann

Similar problem as described from Marc Blasig here on a dev system which wasn't updated for a while after pulling the extension list from TER. Fixed with TRUNCATING tx_extensionmanager_domain_model_extension and updating the core to 6.2.25 and clearing all caches. Seems to be okay for me right for the moment.
