#### Description

Currently trying to call a method of a non existing (not autoloadable) class via `GeneralUtility::callUserFunction()` basically swallows the error (calls debug() in fact) unless the \$errorMode parameter was explicitly set to 2.

This happens basically nowhere in the core thus errors like these are hard to catch/find without additional effort.

The \$errorMode parameter should be dropped and the exception could be thrown based on @\$TYPO3\_CONF\_VARS['SYS']['displayErrors'] instead. Always throwing an exception for these kind of errors would be preferable though.

#### Associated revisions

##### Revision 1de38e97 - 2017-06-18 18:13 - Andreas Fernandez

[!!!][TASK] Always throw exception if a userFunc does not exist

The parameter `errorMode` is removed from the method `GeneralUtility::callUserFunction()`. Thus, the checks against this variable are removed as well, causing exceptions being always thrown now.

Resolves: #74533

Releases: master

Hey Mathias,

how about we remove the option completely in v9.0 (!) and mark it as breaking, basically always throwing a RuntimeException?

Also, we could remove the "&" functionality for persistence logic. I will create a separate patch / issue for that.
