

## TYPO3 Core - Bug #75014

### l18n\_cfg not respected in fluid\_styled\_contents of type special menu

2016-03-11 09:45 - Daniel Siepmann

<b>Tags:</b>			
<b>Description</b>			
<b>The result</b> Pages in default location are shown in menus, even if they should not.			
<b>How to reproduce</b> Create a page in default language, select option "Hide default translation of page" under "Behaviour". Create a content element of kind "special menus" and select the created page. Create the element in default language. The page will be shown and link is broken as page should not be visible because it's not available in default language. <a href="https://docs.typo3.org/typo3cms/FrontendLocalizationGuide/BasicSetupOfALocalizedWebsite/LocalizationOverviewOfThePageTree/1ndex.html#hiding-default-translation-of-pages">https://docs.typo3.org/typo3cms/FrontendLocalizationGuide/BasicSetupOfALocalizedWebsite/LocalizationOverviewOfThePageTree/1ndex.html#hiding-default-translation-of-pages</a>			
For our own implementation we had to add the following SQL to fix the issue:			
<pre>if (\$this-&gt;arguments[static::ARGUMENT_TABLE] === 'pages') {     \$where .= ' AND pages.l18n_cfg != 1'; }</pre>

## History

### #1 - 2016-03-14 16:33 - Andreas Fernandez

- Status changed from New to Needs Feedback
- Assignee deleted (Benni Mack)

Which TYPO3 version are you using? I can't reproduce the issue in 7.6.4.

### #2 - 2016-03-15 10:02 - Daniel Siepmann

We are running 7.6.4 installed via composer.

Take note that this is related to fluid styled content, not TypoScript rendering.  
The ViewHelpers are using Core Functionality which doesn't take this option into account.  
So

```
getSubpagesForPages
```

should add this condition in my opinion.

If needed, I can show you via screen sharing. Just contact me on slack: <https://typo3.slack.com/team/danielsiepmann>

- Status changed from Under Review to New

#### #10 - 2018-01-22 22:04 - Riccardo De Contardi

- Status changed from New to Needs Feedback

Is it still true for version 8.7.9? I tried to reproduce the issue with the following test:

## Prerequisites

- TYPO3 8.7.9
- 2 languages (default (ITA)) and English (ID=1)
- the following pagetree

```
+[ID=1] Home
|
+-- [ID=2] TEST 1
|
+-- [ID=21] TEST 2
|
+-- [ID=24] TEST 3
```

- All the pages are translated in English

## Test

- Edit the page with ID=24 in Default Language > Tab Language > check "Hide default translation of page"
- Home page > Create a new content element, type "Menu of these pages"
- Select the three pages to be included in the menu

## Result

When viewing the page, only the pages ID=2 and ID=21 are visible in the menu.

Could you confirm? Or add some more info about how to reproduce the issue, including your configuration and a step-by-step guide would be great.  
Thanks .
