Description

```
printversion = PAGE
printversion.typeNum = 98
printversion.5 = TEXT
printversion.5.value = <div style="width:80%;">
printversion.10 < styles.content.get
printversion.15 = TEXT
printversion.15.value = </div>

  PRINT = TEXT
  PRINT.value = Druckversion
  PRINT.typolink.parameter.data = TSFE:id
  PRINT.typolink.target = printversion
```

Before 7 LTS this used to add &type=98 to the URL. It used to be useful for linking to frames with typeNum's, but it used to work in 6.2.

[BUGFIX] target to page object must set type parameter

Setting typolink.target to the name of a page object must set the
type query parameter to the typeNum of that page object. By initializing
$theTypeP to an empty string the type is not forced to zero.
