

TYPO3 Core - Bug #75408

Lightbox rel="" attribute pointing to the PID instead of the Contentobjects UID

Description

By default the FSC constant `styles.content.textmedia.linkWrap.lightboxRelAttribute` has this value: `lightbox[{{field:uid}}`

In the `MediaGallery.html` Partial of FSC the `clickEnlarge ViewHelper` is called to render the link around the image:

```
<ce:link.clickEnlarge image="{column.media}" configuration="{settings.media.popup}">
```

The `ClickEnlargeViewHelper` of FSC will now render the default `dataWrap` of FSC using the `ContentObjectRenderer`. The `cObjRenderer` will parse `{field:uid}` to the UID of the current Page and NOT the UID of the current Content Objects. This will make it difficult to separate multiple galleries on one page.

SOLUTION

Bind a "current" argument to the ViewHelper to provide the ContentObject UID.

In `ClickEnlargeViewHelper.php`

Add

```
$this->registerArgument('current', 'integer', 'The Content Object UID', false);
```

To the `initializeArguments()` function.

Then add this to the `renderStatic()` function:

```
if (isset($arguments['current'])) {
    self::getContentObjectRenderer()->setCurrentVal($arguments['current']);
}
```

Now call the ViewHelper like this:

```
<ce:link.clickEnlarge image="{column.media}" configuration="{settings.media.popup}" current="{data.uid}">
```

And change the constant to `lightbox[{{current}}`

Hi, this is already reported in [#72779](#)

Can you please post your solution there?

And if possible come up with a patch on Gerrit <http://wiki.typo3.org/CWT?>

I'll close this ticket as duplicate.
