[!!!][TASK] Always store <p> tags in DB from RTE

Twelve years ago, when the RTE was not working in every browser, TYPO3 always stored as little html code in the database as possible.

Now it's time to really store HTML in the database so the custom transformations from RTE to DB (and vice versa) and from DB to the frontend are getting less.

This introduces less overhead and also makes it easier to work with the content that is stored in the database.

An upgrade wizard (coming separately) will ensure that all existing fields will be migrated.

Resolves: #75708

Releases: master
