

TYPO3 Core - Bug #77312

Flexform is not rendered in content elements, when list_type is not empty

Description

When you have custom content elements using flexform (DCE in this case), which were plugins before, the list_type property may not be empty. In this case the flexform is not rendered properly anymore. Instead you get this:

Edit Page Content "Employee" on page "Neue leere Seite"

The screenshot shows the 'General' tab of a content element configuration. The 'Type' is set to 'Employee'. The 'Language' is 'Default [0]', 'Columns' is 'Left', and 'Hide' is 'Disable'. There are also 'Grid Container' and 'Grid Container Columns' fields. The 'Plugin Options' section has a 'The Title' field.

You can simply reconstruct this issue, by adding any value to list_type property of a content element and edit the item. Of course the content element needs to use pi_flexform.

This issue appears in TYPO3 7.6 and 6.2, so it's not a "new form engine" issue only.

History

#1 - 2017-12-12 16:37 - Riccardo De Contardi

Does this still happens with TYPO3 8.7? Could it be related to the behavior of the field pi_flexform, which does not get cleaned when you switch from one content element to another (the new xml will be appended)?

#2 - 2017-12-13 17:26 - Armin Vieweg

- TYPO3 Version changed from 7 to 8

Yes it does. Same behaviour as described before. Tested with 8.7.9.

#3 - 2018-02-03 23:29 - Susanne Moog

- Category set to FormEngine aka TCEforms
