Description	
This all goes in BE (FormEngine):	
Scenario:	
- Image in filadmin, sys_file_metadata record in default language, title field filled.	
- Translate sys_file_metadata record to any language, title field contains translated data	
- Create tt_content record in default language, reference the image.	
--> title field to be overridden by sys_file_reference field title contains the translated value, not the one from sys_file_metadata in default language.

History

#1 - 2016-12-06 12:10 - Anja Leichsenring

some tries with creation order turned out, that always the latest created sys_file_metadata record is used.
