Description

File PATH_typo3/components/testing_framework/core/Build/AcceptanceTests.yml is used by bamboo for the automatic test execution. This file has been moved to the testing_framework component, but the tests itself still reside in PATH_typo3/typo3/sysext/core. The path details in the yml file feel humble, additionally upon extraction of the component this paths might change, depending on the installation of TYPO3.

This needs to be streamlined and adjusted.

Maybe it is a good idea to extract the acceptance tests as a separate package on its own ...
