<b>Description</b> Basically localizations can happen in two different modes - either the connected mode (localization belongs to a parent language record) or the free mode (localization has a language, but does not depend on any parent).  For fields having I10n_mode set to exclude in the connected mode, the values of the parent language record shall be cloned to all particular and dependent localization records each time the parent record gets updated (or created). On the other side I10n_mode exclude does not make much sense in the free mode, since there's no concept of any parent in that regard. In this scenario the value is cloned from the parent language record once during the creation of the localization record. In the context of the localization, the field value is shown and can be modified without any restrictions.

### History

#### #1 - 2017-06-30 19:59 - Philipp Gampe

- Related to Bug #81761: I10n\_mode exclude is ignored in IRRE relations and deletes unrelated child records during I10n added

#### #2 - 2019-03-03 16:43 - Susanne Moog

- Status changed from New to Needs Feedback

- Assignee set to Oliver Hader

Is this task still up-to-date? Afaics the value of I10n exclude fields is already copied when translating.

#### #3 - 2020-03-24 11:42 - Oliver Hader

- Related to Bug #80141: Add allowLanguageSynchronization chain resolving added

#### #4 - 2020-03-24 11:48 - Oliver Hader

- Status changed from Needs Feedback to Accepted

Seems like this has been addressed in [#80141](#) already (after this very issue has been created).

### I10n\_mode=exclude for free mode: Record 298 is copied to language 1 as record 303

<https://github.com/TYPO3/TYPO3\CMS/blob/d38fee08423d4ee943b7b0bad78a7675e92977ff/typo3/sysext/core/Tests/Functional/DataHandling/Regular/Modify/DataSet/copyContentToLanguageWExclude.csv#L10>

### I10n\_mode=exclude for connected mode: Missing test case

→ there should be a new test case localizeContentWithLocalizationExclude
