Description

If i crop a watermark image with GIFBUILDER, it will work with a crop-X-value of 0.
If i crop with a X-value of 30 it will throw a error (see screenshot)

There is a incomplete filename in the call
imageCreateFromFile("/home/www/p384125/html/typo3/fileadmin/_processed_/5/d/csm_3D_a059d90")
This immagine ist correctly saved in ../_processed_/5/d/ with filename csm_3D_a059d90350.gif

my code for the watermark:

```
file = GIFBUILDER
file {
    XY = [10.w],[10.h]
    format = jpg
    quality = 90
    maxW = 1920
    maxH = 1080

    10 = IMAGE
    10 {
        file {
            import.field = uid
            treatIdAsReference = 1
            width.field = imageWidth
            maxW.field = maxImageWidth
            maxW.noTrimWrap = ||c|
            #crop = 0,0,1498,829
            crop = 30,0,1498,829
        }
    }

    15 = IMAGE
    15.file = fileadmin/copyright.png
    15.mask = fileadmin/copyright-mask2.png
}
```

History

#1 - 2017-01-27 08:42 - Maximilian Ziermaier

- Category set to Image Cropping

#2 - 2017-10-27 21:20 - Riccardo De Contardi

- Category changed from Image Cropping to Image Generation / GIFBUILDER
