</script><br />
<b>Fatal error</b>: Call to a member function getUId() on
```

In the bottom the message seems being cropped, but that seems being the important part.
Server-logs are not accessible.
The update of the extensions is not done.
This happens in several sessions and browsers.

In the module System->Log the following message is shown:

```
Core: Exception handler (WEB): Uncaught TYPO3 Exception: #1417988921: The CSRF protection token fo
r the requested module is missing or invalid | TYPO3\CMS\Core\Exception thrown in file ../../typo3/

- Status changed from New to Needs Feedback

turn of the the deprecation or debugging and try again. the message is about deprecated condition or similair

#2 - 2017-02-13 13:54 - David Bruchmann

I turned on the debug-messages for being able to post here at least something respectively discovering something perhaps.

The error was shown after an upgrade and in this form shown when the extension-table is faultily not present in the database.
I still got another message shown after the the table did exist in the database but never documented it and probably it was a cache-issue.
Finally I got it working and I suppose the bug was sitting in front of the pc. So this bug-report can be closed.
