Description

CSS Styled Content and Fluid Styled Content have been diverged from the beginning. CSC now has reached the end of its lifecycle and needs to be replaced through FSC. To provide an easy migration from CSC to FSC the feature needs to be streamlined, all possible data needs to be migrated.

Subtasks:

Task # 80051: Update fluid_styled_content documentation	Closed
Bug # 80063: Use audio partial for rendering audio	Closed

[!!!][FEATURE] Streamline Fluid Styled Content and CSS Styled Content

CSS Styled Content has been a long time the preferred way of rendering content in the frontend. Fluid Styled Content was introduced as successor of CSC, but the feature set diverged from the beginning. The lack of flexibility and incomplete feature set in comparison to CSC made it hard to migrate existing instances.

Since TYPO3 CMS 7.6 Fluid-Templates are the defined standard and official recommendation for content rendering. The feature set of FSC is now matching CSC. Both content renderings are now streamlined to be fully compatible with each other. For the period of CMS 8 LTS CSC will share the same capabilities to make a transition as easy as possible. CSC is now deprecated and goes into maintenance mode and will be removed with CMS 9.

For compatibility, CSC is now supporting Textmedia that was before

exclusive to FSC. But also FSC has learned some tricks from CSC. Fluid Styled Content has now support for all content elements prior existing only in CSC, this includes "Text", "Text and Images" and "Images". Also for example "Frames", "Space before" and "Space after" are now again featured across both content rendering methods.

[FOLLOWUP][FEATURE] Streamline Fluid Styled Content and CSS Styled Content

The database field `section_frame` is only available if CSS Styled Content was installed previously, that needs to be respected by the upgrade wizard and only enable the wizard if the field is present in the database.

Revision 3307a5db - 2017-03-09 08:47 - Josef Glatz

[BUGFIX] Make styles.content.get available after major FSC rewrite

Since the major rewrite of EXT:fluid_styled_content and EXT:css_styled_content the following TypoScript setup must be loaded by default:

- `styles.content.get` can be used as ready2use `CONTENT` object for `colPos = 0`
- `tt_content.default` outputs necessary info in the frontend, if the CType has currently no rendering definition

Both can be used independently from FSC or CSC.

Including the necessary TypoScript via `addTypoScriptSetup()` takes care of loading it before any other activated extension.

Revision ae39eb5a - 2020-08-27 14:19 - Christian Kuhn

[!!!][TASK] Drop TCA [ctrl][thumbnail] and user uc[thumbnailsByDefault]

Setting TCA[\$someTable][ctrl][thumbnail] to some image related column made the list module show attached images as preview. Until core v8, this has been used for tt_content and has been dropped for this table because two different fields (images, media) are used and the setting could not cope with that. For extensions with own tables, this setting has been used very seldom. It also partially destroys the list module view.

The patch drops evaluation of this ctrl setting in the list module. With this gone, the 'thumbnailsByDefault' setting of the user settings module only affects the file list module. The file list module has it's own checkbox to toggle image preview rendering, so the setup module checkbox has little benefit and is removed as well. This additionally fixes a bug that thumbnail preview rendering in file list module can't be turned off if the setup module checkbox is set.

Additionally, the patch drops some unused css for the list module, 'typo3-dblist' simply does not exist as class.
