<b>Description</b>			
Given a module configuration like			
<pre>module.tx_example {     view {         templateRootPaths.0 = EXT:example/Resources/Private/Backend/Templates/         partialRootPaths.0 = EXT:example/Resources/Private/Backend/Partials/         layoutRootPaths.0 = EXT:example/Resources/Private/Backend/Layouts/     } }</pre>			
I expect the backend module using a template in Resources/Private/Backend/Templates/ but instead only Resources/Private/Templates/ is taken into account for finding the module view template.			
This is related to patch <a href="https://review.typo3.org/51283/">https://review.typo3.org/51283/</a> where the default template paths are always overwriting the configured ones.

[BUGFIX] Avoid overwriting configured Fluid template paths

Due to change <https://review.typo3.org/51283/> the defaultPaths in Fluid overwrite the configuration paths for the first (0-indexed) array item. This means currently it is not possible to define an own Fluid template path with index 0. This patch merges both arrays and ensures the configuration paths are added at last. This is needed because Fluid Standalone is using template paths from last to first.

Resolves: #79681

Releases: master
