<b>Tags:</b>			
<b>Description</b>			
The improved image manipulation removed the calls to "fieldWizards" and "fieldInformation" and removed the surrounding div's.			
The image manipulation element should be extendable like all other elements and should re-implement those calls and wraps.

[BUGFIX] Eliminate gremlins in image cropper

Refactor rendering to use two templates, a layout and a partial to be more flexible.

Now also force the crop to be applied, even when the editor does not open the image manipulation.

This is important when only one aspect ratio is allowed to not allow the editor to save an invalid state.

Eliminate several quirks in the TypeScript code, among them:

- reset state when closing the cropper
- reset state when modal is dismissed
- correctly initialize all previews
- show correct size of crop area for big images
- avoid accidental dismiss of the modal

Last but not least add the accidentally removed form engine wizard html fields again.
