<b>Description</b>			
In the function <code>\TYPO3\CMS\Core\Utility\ExtensionManagementUtility::registerPageTSConfigFile()</code> one can not enter a language string like <code>LLL:EXT:my_ext/Resources/Private/Language/locallang_db.xml:pages.pageTSconfig.my_ext_be_layouts</code> because the title parameter will be concatenated with the extension key in braces, thus breaking the LLL replacement logic. If one does add the LLL string, the replacement will be an empty string. Could we remove the extension key part or at least detect, if the title is a LLL string? It would be nice if we could use the LLL replacement logic here, too.

#### History

##### #1 - 2017-02-21 06:45 - Georg Ringer

- *Tracker changed from Bug to Feature*

##### #2 - 2017-02-22 12:27 - Kevin Ditscheid

This also applies to the function `\TYPO3\CMS\Core\Utility\ExtensionManagementUtility::addStaticFile()` of the same reasons

##### #3 - 2019-11-25 10:49 - Sybille Peters

Still reproducible in 9.5.11.

Is this not a bug?

Patch set 2 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/c/Packages/TYPO3.CMS/+63693>

##### #7 - 2020-03-17 22:39 - Georg Ringer

- *Status changed from Under Review to Rejected*

I am closing this issue because it would lead to an inconsistent behaviour in the backend. Having the extension key added to the label is very nice as it improves the search a lot.

If you need it translated - which I fully understand as well - please modify the TCA directly which is absolutely valid too by adding it to `$GLOBALS['TCA']['pages']['columns']['tsconfig_includes']['config']['items']` directly.
