Description			
Now it's possible to define multiple crop variants for an image (sys_file_reference) there is the need to restrict the shown cropVariants this for each table.field in the BE forms.			
This to improve the UI and UX for the editor as in most use-cases only 1 or a few crop variant are needed for a specific field. For example the header image has different crop variants then a teaser image.			
It should be possible to define the available crop variants on table_name.field_name and maybe also on table_name.{type}

[BUGFIX] Add possibility to define crop variants per table

Currently it is not possible to define crop variants per table or content type. This makes this feature a lot less useful as it could be.

Add a form data provider to make this possible.

Also fix the issue that the full size image is used instead of a smaller variant in the interface and hide the cropping tool if no image size can be determined (happens for some SVGs).

Focus area now also works when no cover areas are defined.
