Deprecate TSFE->whichWorkspace parameter

The parameter of the $TSFE->whichWorkspace() method decides whether the UID of the current workspace should be returned or the actual "title" of the sys_workspace record.

As this parameter is not in use anymore and clearly makes this function harder to understand why and when someone could use this, this property is marked as deprecated.

Instead, fetching the workspace title should happen in the place where it is needed.

Resolves: #80485
Releases: master
