Description			
A input field with eval datetime converts to a wrong timestamp. After saving a form, the date will have a difference of 2 or 4 hours (Summertime).

I like to be more precise.

Eval set to **datetime** seems to work fine in FlexForm.

The problem is if eval is set to **time**, then the time changes with every saving.

As far as I could see the difference between datetime and time is, that in DataHandler::checkValue_input_Eval \$value is an timestamp for time (1494418260), and a date string for datetime (2017-05-10T14:11:00+00:00).
Maybe the problem is somewhere in a JavaScript.
