

Server Team - Bug #80769

virsh migrate

2017-04-09 09:41 - Andri Steiner

Status:	Closed	Start date:	2017-04-09
Priority:	Should have	Due date:	
Assignee:	Andri Steiner	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
While migration of some VMs went fine, we lost some configurations (/etc/libvirt/qemu/srvXXX.xml) on the destination node. Migrated VMs where running fine on the new node, but we lost them after a node reboot because the configuration was missing.			
Tasks			
- check and restore missing configuration - check migration and adjust documentation if required			

History

#1 - 2017-04-09 09:45 - Andri Steiner

```
root@ms08 /home/asteiner # lvsdisplay | grep "LV Name" | awk '{print $3}' | sort > lv.txt
root@ms08 /home/asteiner # virsh list --all --name | sort > virsh.txt
root@ms08 /home/asteiner # diff -u virsh.txt lv.txt
=> keine fehlenden VMs
```

```
root@ms09 /home/asteiner # lvsdisplay | grep "LV Name" | awk '{print $3}' | sort > lv.txt
root@ms09 /home/asteiner # virsh list --all --name | sort > virsh.txt
root@ms09 /home/asteiner # diff -u virsh.txt lv.txt
=> srv178
```

#2 - 2017-04-09 09:59 - Andri Steiner

- srv178.xml Restore ab Backup "You are browsing backup [#514](#), which started around 4/7 05:25 (2.2 days ago)"
- `virsh define srv178.xml`

#3 - 2017-04-10 22:34 - Andri Steiner

- Status changed from New to Resolved

Options --undefinesource --persistent required, updated documentation and also added and clarified other parts of migration process

#4 - 2017-04-29 17:22 - Steffen Gebert

- Status changed from Resolved to Closed
