<b>TYPO3 Version:</b>	8	<b>Is Regression:</b>	No
<b>PHP Version:</b>	7.0	<b>Sprint Focus:</b>	
<b>Tags:</b>			
<b>Description</b>			
In Upgrade wizard when the option "Show database queries performed" is selected then often the query is displayed like UPDATE `sys_be_shortcuts` SET `url` = :dcValue1 WHERE `uid` = :dcValue2			
An admin want to automate the query in multiple TYPO3 installations but can't know what really happened since he can't know what 'dcValueX' is.

Hey. The feature has always been done half-way since ever and it got worse with doctrine since v8. In v9, the feature has been removed. Since v8 (?) wizards are also marked in db as done and not in LocalConfiguration anymore, so it is much easier now to re-run them after deployment. Since v9, that's even possible via cli. Thus, there shouldn't be any need to copy+paste the queries around anymore - just re-run the wizard. I'll reject the issue for now.
