Description

The EmailFinisher uses templatePathAndFilename and due to this it doesn't support the fallback we know from most places in the core (templateRootPaths).

My suggestion would be:

instead of

```
templatePathAndFilename: 'EXT:form/Resources/Private/Frontend/Templates/Finishers/Email/{@format}.html'
```

use

```
templateName: '{@format}.html'  
templateRootPaths.20 = 'EXT:form/Resources/Private/Frontend/Templates/Finishers/Email/'
```

IMO this is a bug and not a feature because this behavior is inconsistent with the rest of the core
