Description

This issue is just a suggestion to re-think how the information shown on the table that sums up all the TS templates in your site.

(I mean when you click on Root page > TS Template module)

Take a look at the attached screenshot "Schermata 2017-06-02 alle 16.20.09.png": the home page "homec" has three templates:

- One is the root template
- One is an ext template
- One is an ext template, and it is disabled

This table lacks several information:

- it is impossible to tell which templates are disabled and which are not
- the columns "is root?" and "is ext?" both show a check. Which template is the root? and which ones are the ext? The only information is the total number of templates.

Revision 81cfea0 - 2018-08-10 12:38 - Joerg Kummer

[TASK] Improve TS Template module information on root level list

The template tool on root level, which displays an overview of pages including templates, now displays instead of the count of templates all related templates of a page with several informations like:

- title
- state (by icon)
- is root or extend
- direct link to edit (with ID and site-title as link title)

Pages in rootline, which do not include templates itself are no longer linked to the template modul.

Database query has been streamlined, and all render logic of HTML specific output has been moved to FLUID templating.

This offers the possibility to add filter or search to this view.

An issue with page sorting in page tree, when rootline pages does not contain TS templates has been fixed.

Resolves: #81430

Releases: master, 8.7

I found out, that sorting of pages in page tree didn't match the real sorting, when there are pages in rootline without TS templates. I implemented a fix for this issue too.
