Description

As the name of the temp directory can be configured (f.e.

```
$GLOBALS['TYPO3_CONF_VARS']['SYS']['caching']['cacheConfigurations']['cache_core']['options'][
'cacheDirectory'] = 'typo3temp_local';
```

), the name "typo3temp" shouldn't be hardcoded in the ClearCacheService Line 42 (TYPO3 7.6 Line 56).

- Status changed from Under Review to Needs Feedback

As explained in the linked ticket of typo3_console, the two-level approach is to do a best-guess and erase caches based on the known default configuration for the edge case the actual configuration is no loadable. As second level the caches are flushed according to the configuration.

So please explain in more detail, why this does not work for you.
