**Description**

Hi Dan,  
Great extension and hoping for a 8.7.x compatibility release. Can help testing but since I am more of an integrator, can unfortunately not offer support with code development.

Hi Stefan

Do you experience any issues on TYPO3 8?

Best,  
Dan

I get the following error during install:

Class 'TYPO3\CMS\Backend\Sprite\SpriteManager' not found

Attached the full error report after install.

Cheers,

##### #3 - 2018-02-09 09:19 - Marco Kuprat

I'm just testing compatibility with TYPO3 8.7.

Solution for the 'SpriteManager' issue is:

1) in "ext\_tables.php":

Comment out the following lines in the else-block of the last if-statement:

```
$TCA['pages']['columns']['module']['config']['items'][] = array('Job Fair', 'jobfair', 'EXT:jobfair/Resources/Public/Icons/folder.gif');
\TYPO3\CMS\Backend\Sprite\SpriteManager::addTcaTypeIcon('pages', 'contains-jobfair', 'EXT:jobfair/Resources/Public/Icons/folder.gif');
```

2) in "ext\_localconf.php":

Add the following lines:

```
$iconRegistry = \TYPO3\CMS\Core\Utility\GeneralUtility::makeInstance(\TYPO3\CMS\Core\Imaging\IconRegistry::cla
```

```
ss);  
$iconRegistry->registerIcon('jobfair', \TYPO3\CMS\Core\Imaging\IconProvider\BitmapIconProvider::class, ['source' => 'EXT:jobfair/Resources/Public/Icons/folder.gif']);
```

After that, uninstall the extension and install it again if you get an error message about missing database tables.

The next issue I found were related to the flashMessages-Viewhelper in the fluid templates: the argument "renderMode" is deprecated in TYPO3 8.

So you have to change "<f:flashMessages renderMode="div" />" to "<f:flashMessages />" where appropriated.

Currently I'm stuck at the following error message in the detail view:

```
Fatal error: Class 'TYPO3\CMS\Fluid\ViewHelpers\IfViewHelper' not found in [path here]/typo3conf/ext/jobfair/Classes/ViewHelpers/Security/EditLinkViewHelper.php on line 26
```

Regards  
Marco

#### #4 - 2018-03-06 11:30 - Felix Herrmann

The namespace has changed:

```
use TYPO3Fluid\Fluid\ViewHelpers\IfViewHelper;
```

instead of

```
use TYPO3\CMS\Fluid\ViewHelpers\IfViewHelper;
```

but then another error occurred

```
Core: Exception handler (WEB): Uncaught TYPO3 Exception:  
Undeclared arguments passed to ViewHelper Dan\Jobfair\ViewHelpers\Security>EditLinkViewHelper: job.  
Valid arguments are: then, else, condition
```

We don't use the frontend-editing features so i removed the viewhelper from the detail-view. This works for me so far in 8.7.10

Hi,

I am curious, does Job Fair function in TYPO3 8.7 now, with all edits mentioned above? I surely hope so, as I need to upgrade one project with Job Fair in it to 8.7

Thanks!

Michel.
