Description

Hello guys,

maybe you can fix this buggy wizard ;)

State:

1. Table "A" is in relation with table "B" via a MM-table.
2. TCA is configured to list the relation as a side-by-side field:

```
'config' => [  
    'type' => 'select',  
    'renderType' => 'selectMultipleSideBySide',  
    'foreign_table' => 'tx_myextname_domain_model_b',  
    'MM' => 'tx_myextname_a_col_mm',  
    'size' => 10,  
    'autoSizeMax' => 30,  
    'maxitems' => 9999,  
    'multiple' => 0,  
    'wizards' => [  
        '_PADDING' => 1,  
        '_VERTICAL' => 1,  
        'add' => [  
            'module' => [  
                'name' => 'wizard_add',  
            ],  
            'type' => 'script',  
            'title' => 'Create new',  
            'icon' => 'EXT:backend/Resources/Public/Images/FormFieldWizard/wizard_add.gif',  
            'params' => [  
                'table' => 'tx_myextname_domain_model_b',  
                'pid' => '###CURRENT_PID###',  
                'setValue' => 'prepend'  
            ]  
        ]  
    ]  
]
```

Expected behaviour:

When clicking on "add"-icon and saving a newly generated item of B, then it should be prepended to the list of related items.

Actual behaviour:

All related items are going to be deleted except one and the newly generated item.

Thanks 4 help!

Greetings :)
