Server Team - Bug #81998

Remove piwik tracking from review.typo3.org

Description

The piwik tracking code causes some delays when loading the site, so it should be removed.

Maybe even consider removing it from forge.typo3.org, although the impact here is not very high, I also don't really see a need for it here as well.

as we've moved Piwik to another server (with SSD), the job or whatever thing, which runs at ~0:50 doesn't slow down the site anymore (to the best of our knowledge).

If this turns out wrong, we would remove it. But anyways, we removed all custom styling for the next Gerrit update and that will be gone as well.

Problems remain. Let's just remove it from Gerrit.

Hm, seems like pwik isn't removed from gerrit yet. Do the changes need to be deployed somehow?

okay, I rolled back to the previous cookbook version (bringing back piwik tracking and gerrit 2.4.6 instead of
.8). I have no clue why this happened,
but it shouldn't be because of the change of the tracking code. @stucki I've pinned the cookbook version like
this:
```knife node run list set srv198.typo3.org 'recipe[site-reviewtypo3org@1.2.11]'```
Once you're confident that it works (should we start headless browers in our pipeline and let it take screen s
hots SCNR...), just set it again without the version.
