#### Description

It is not possible to add an element of type inline inside an element of type inline in the **page view**.  
An "error 500" message is showing up. The logge error message is:

```
Core: Exception handler (WEB): Uncaught TYPO3 Exception: #1446996319: Configuration retrieved from FlexForm is incomplete or not of type "inline". | UnexpectedValueException thrown in file /var/www/html/typo3_src-7.6.21-bi/typo3/sysext/backend/Classes/Controller/FormInlineAjaxController.php in line 912.
```

The same error occurs while trying to expand a collapsed inline element inside an other inline element.

The error is only present in the page view. If I edit the "upper" inline element in list view, there is no error.

It's the same problem described in [#71436](#) and the patch in <https://forge.typo3.org/issues/71436#note-49> works when manually applied (see [comment of Bart Lammers](#)).

**Update:** [See the working patch in comment #7](#)

More detailed description to reproduce the error:

There is a plugin where I can add elements of type "inline" (in backend). These elements are the parent elements and contain a FlexForm definition. In that FlexForm area I can add some child elements (also of type "inline").

So when I edit my plugin and add some parent element and I try to add a child element, the error occurs. If I save my plugin (with the added parent element) and change to the list view, I am able to edit the parent element directly and add a child element.

The error did not exists in TYPO3 6.2.

Oh, sorry, Morton was entered as assignee in the linked issue ([#71436](#)), so I thought it's a good idea to make sure he knows this one, too.

**#6 - 2017-09-13 13:32 - Bart Lammers**

In 7.6.22 this problem still persists. Due to changes in the FormInlineAjaxController the patch from Leonie Philine Bitto (<https://forge.typo3.org/issues/71436#note-49>) does not apply anymore, but the changes still work when manually applied.

**#7 - 2017-09-13 14:12 - Bart Lammers**

- File *FormInlineAjaxController.php.patch* added

Patch of the same change, but applies to 7.6.22

Thank you for your report.

Even though it has been some time, would you consider checking if your patch idea is still up to date and upload it to our Gerrit review server?

Someone could do this for you, but I am thinking you might like the opportunity to contribute to TYPO3 yourself.

You can find a description of the TYPO3 contribution workflow here: <https://docs.typo3.org/typo3cms/ContributionWorkflowGuide/>

Hint: If you get stuck anywhere, ask on Slack in the #typo3-cms-coredev channel. You can register in the TYPO3 slack workspace here: <https://forger.typo3.com/slack>

Thank you in advance!

**#11 - 2019-04-17 15:17 - Nikolas Hagelstein**

Any news on this issue?.

Cheers,  
Nikolas
