Description

We've got a bi-lingual TYPO3 with German as first (default) and English as second language. Our images have translated meta data (German and English).

When selecting images in an image content element in the default translation, the image meta data (title, alt text, description) default values are shown in the wrong language.

Example:

- Image has default title "Bild DE" and translated title "Image EN"
- Image content element is created in the default language (German), and the image is selected
- The "Title" of the FAL relation correctly shows "Bild DE"
- The "Image Metadata" shows 'Default: "Image EN"' instead of 'Default: "Bild DE"'

See the screenshot.

Happens with TYPO3 8.7.4.
