Description

Hello core-Team,

currently the download of translations for TYPO3 does not work:

<https://git-t3o.typo3.org/t3o/ter/issues/207>

As a user everything seems to work in Language BE Module. The status bar fills up and on some systems the typo3conf/l10n Folder will be filled again.

In source code there are some try-catch where the catch part consists of a simple comment, only:

```
} catch (Exception $exception) {  
    // @todo logging  
}
```

I have debugged AJAX network traffic with Chrome while updating translations. A valid JSON will be response, but its state part is 2 (static::TRANSLATION_FAILED), but the user does not get any useful hints about that.

Switch to "Translation Overview" and try to get a translation for a single extension like "about". It seems to work. You got success messages. The icon has changed to a success icon. But in the background nothing works.

Would be cool to have valid messages and UX in translation module

Stefan

This ticket is more about feedback not a specific error.

#3 - 2017-09-06 12:45 - Stefan Froemken

This is not a duplication of [#82286](#). It shows a problem about language files which can not be downloaded. This will be solved today night:

https://git-t3o.typo3.org/t3o/ter/issues/207#note_5383

In my ticket I want to have a better error reporting to the customer/user, as currently everything seems to work (success messages), although it doesn't in the background.

Hey Stefan,

we've improved the situation in TYPO3 v9, can you let us know if this has changed for the better?

#6 - 2020-01-10 08:49 - Stefan Froemken

Hi Benni,

I have unplugged my Network Cable and tried it again.

I see the light blue progress bar, what is OK for me.

After that I see following:

```
Language packs updated
```

```
0 new language packs downloaded, 0 language packs updated, 51 language packs not available
```

with a green background, which is IMO wrong.

Further the message "51 language packs not available" is wrong, too, as there is a german package for "about" available.

The user still won't be informed that there is a network error.

Stefan
