Description			
<p>n both versions 8.7.5 and also 8.7.6 is the problem. when we open an article and it contains a table element, we destroyed this article after saving it. the sequence is, all tags are no longer written and all html code is output at the frontend. in the source code there are only nch doe <p> tags and all others are not included.</p> <p>This is no matter whether you change something at the table or in the surrounding text. all contents will be destroyed when re-storing.</p> <p>After resetting to version 8.7.4, everything works normally. Destroyed items are destroyed.</p> <p>Thanks germai</p>			

History

#1 - 2017-09-08 13:54 - Michael Stucki

- Project changed from *forge.typo3.org* to *TYPO3 Core*
- Category deleted (Support)
- *TYPO3 Version* set to 8

Move to correct project.

#2 - 2017-09-08 19:55 - Wouter Wolters

- Status changed from *New* to *Needs Feedback*

CKeditor version in 8.7.6 is the same as in 8.7.4, in 8.7.5 an update was done but got reverted in the latest 8 version. Are you sure this is still a problem on 8.7.6 or could it be a browser caching issue?

#3 - 2017-09-08 20:16 - ger mai

I do not assume it can be the browser cache. First I have seen the problem with a customer installation which was on the stand 8.7.5. Our development system for the customer still had version 8.7.4. We had no problems. Then I have the latest version. In the GIT I found no 8.7.5 version. We have played 8.7.6 on our development system. This was the same behavior as under the live system with 8.7.5. After changing our development system back to 8.7.4 again works fine. The live system under 8.7.4 also works perfectly.

#4 - 2017-09-08 21:47 - Riccardo De Contardi

I am currently not able to reproduce it with 8.7.6

#5 - 2017-09-08 22:12 - ger mai

I have try it on a new Installation of instructor pack in the picture first table with 8.7.6 and second 8.7.4.
I can reproduce it on all Installation i test it .

#6 - 2017-09-08 22:26 - Riccardo De Contardi

Pardon me for my question, but what is the "instructor pack"?

I also wonder where does the class="info" comes from...

#7 - 2017-09-08 22:42 - ger mai

- File Bildschirmfoto 2017-09-08 um 22.41.45.JPG added

sorry it was a typo "The official Introduction Package" it is a base system. I put a class to the tr Element. it is only a test.

#8 - 2017-09-11 10:08 - Riccardo De Contardi

I tried with a system with bootstrap_package installed, but still not able to reproduce it.

#9 - 2017-09-11 12:27 - ger mai

we must verify this again.
Yes with the with bootstrap_package funktioniert it.

#10 - 2017-09-12 09:34 - ger mai

in fact, we can trace this to 95% of all installations. Only absconded minimal systems do not show the problem so. Since it works with 8.7.4 tadelos, I can only assume that it has to do with the core changes.

#11 - 2017-09-19 11:16 - Grégory Duchesnes

Seems to be related to [#82476](#).

i can confirm weird behavior on CKeditor (removes p and span classes) after a direct upgrade from 8.7.4 to 8.7.6 so there is no 8.7.5 cache problem involved.

Furthermore a simple downgrade to 8.7.4 solves the problem without need to clear the browser cache. Therefore it does not seem to be a JS problem.

My feeling is that some default settings changed in typo3_src-8.7.6/typo3/sysex/core/Classes/Configuration/Richtext.php

#12 - 2017-09-19 12:14 - Grégory Duchesnes

I found the origin of the problem, the bugfix "[BUGFIX] Allow to override RTE config via PageTS" changed the order of override for PageTS vs YAML RTE configuration therefore you could have a buggy line in your TSConfig it was fixed by the YAML configuration.
Now that this order has changed your TS might need some cleanup, in my case i add an absolute RTE.default.proc.allowedClasses value which broke my RTE in 8.7.6.

This is not a bug but should be mentioned as a breaking change

#13 - 2017-10-01 12:38 - Riccardo De Contardi

maybe it has been solved with <https://forge.typo3.org/issues/81381> ?

#14 - 2018-02-06 20:00 - Wouter Wolters

- Status changed from Needs Feedback to Closed

This was not related to the ckeditor update but as mentioned here another patch introduced another order of importing the configuration files. This change was not marked as breaking but should have been marked as breaking change. Closing this as solved.
