Description

Hello core Team,

in TYPO3 there are some TransientBackends. In some scenarios like CLI Script these Caches will exceed my memory_limit. Of course I can change these Backends in my ext_localconf.php, but in that case this has effect to all other CLI Scripts, too. A solution would be overriding these cache backends while current request.

Currently you throw an Exception while registering a cache with same identifier, which is OK for me, as long as I have the possibility to remove a cache by its identifier.

Stefan

History

#1 - 2017-09-13 16:07 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/54136>

#2 - 2018-09-30 18:59 - Christian Kuhn

- Status changed from Under Review to Closed

The pending patch has been rejected and Stefan noted "I found another possibility. getCache, cyclic flush, done."
