Description

The Localization State object has an incomplete assignment is the constructor - sanitize processing is overriden by enrich processing, however both should be combined instead.

Revision 85836c4c - 2017-10-18 00:47 - Oliver Hader

[BUGFIX] Localization State does not properly sanitize and enrich

The Localization State object has an incomplete assignment in the constructor - sanitize processing is overridden by enrich processing, however both should be combined instead.

The current side-effects were, that

- localization state could contain fields that were not defined in TCA having support for the `allowLanguageSynchronization` setting
- state values different than `custom`, `source` or `parent` have not been overridden by the default `parent` value

Resolves: #82793
Releases: 8.7, master
