<b>Description</b>			
If an invalid value is set for config.metaCharset, the whole page output is dropped and an empty page is shown instead.			
There was a workaround added ( <a href="#">#81634</a> ) for cases like UTF-8 instead of utf-8 but there are millions of ways of doing it wrong, e.g. utf8 instead of utf-8.			
Instead of silently dropping the page content without notice, an error should be thrown which clearly hints at the error.
