

## Page Teaser (with Fluid) - Bug #82960

### pw\_teaser installed by Composer has wrong dirname

2017-11-09 13:20 - Anonymous

<b>Status:</b>	New	<b>Start date:</b>	2017-11-09
<b>Priority:</b>	Could have	<b>Due date:</b>	
<b>Assignee:</b>	Armin Vieweg	<b>% Done:</b>	0%

<b>Target version:</b>			
<b>Description</b>			
Hi Armin,			
I installed pw_teaser 3.4.2 from Packagist (arminvieweg/pw_teaser) into a TYPO3 v8, which leads to a directory "pw-teaser" (with hyphen), which makes it unusable.			
When installed from TER (typo3-ter/pw-teaser, same version), it is correctly installed as "pw_teaser" (with underscore).			
My system info: Linux / PHP 7.1 / composer 1.5.2 / TYPO3 8.7.8 Composer mode / pw_teaser 3.4.2			
Greetings			
Sascha

Hi,

cant use this extension with composer too.

Please change the `replace` part in the composer.json like this:

```
{
  "replace": {
    "typo3-ter/pw-teaser": "self.version"
  },
  "extra": {
    "typo3/cms": {
      "extension-key": "pw_teaser"
    }
  }
}
```

The first key defines the folder name. That's why the folder currently is `pw-teaser`.
