Description

If you create translated metadata for a file (edit metadata in default language, then click the flag symbol for any other installed language in list view), there is no easy way of deleting the created record again.

Only way I found was to select the records history and 'reverse' the creation of the record. If for some reason the history functionality is not available, there is no way of deleting translated meta data.

[BUGFIX] Enable deletion of translated sys_file_metadata records

UserTS disableDelete was set for sys_file_metadata globally and therefore also prevented the deletion of translated file metadata. By preventing deletion of sys_file_metadata records only for default language records, the user can remove translated ones again at will.

Resolves: #83066

Deletion of `sys_file_metadata` records in default language has been prevented through the interface, because these records are created on the fly upon accessing the file record, so the deletion by user just made no sense. In this process, ALL deletion of `sys_file_metadata` records has been blocked, so the situation of non deletable translations occurred.
By checking the `sys_language_uid` of the record, this issue can be avoided. Users should be able to delete translations of `sys_file_metadata` records (but still not the default language ones).
