Description

Hi there,

I found a bug after upgrading from TYPO3 4.5 to 6.2, then 7.6 and finally 8.7.8 - maybe it's a global bug. It took a while but after reaching TYPO3 8.7 I found out that there is an error when I wanted to enter the Tab "Extensions" in the Backend.

Uncaught TYPO3 Exception

The "../typo3conf/ext/*/" directory does not exist.

InvalidArgumentException thrown in file

../typo3_src-8.7.8/vendor/symfony/finder/Finder.php in line 546.

I was wondering and just tried out many things that didn't work.

I was thinking about the fact that there is NO extension installed yet - only the blank index.html file was in the directory. After a manual installation of (e.g.) realurl this error is gone.

I think it isn't hard to fix this "issue" ... or?

Can anybody reproduce it?

[BUGFIX] Only scan package base paths if subdirectories exist

Include possible package base paths only if subdirectories are available.
 Otherwise no extension can be found in the base path anyway.

Resolves: #83070
