##### Revision d3cae300 - 2018-05-17 10:10 - Bjoern Jacob

[TASK] Add clarification regarding honeypot and caching

This patch adds some documentation regarding the automatic inclusion of the honeypot and (static) site caching.

Resolves: #83212

Releases: master, 8.7

The behaviour is correct, however EXT:form is adding session data on a page with a form plugin, so this is a killer "out-of-the-core". The rest of the behaviour is correct - e.g. an extension adding shopping cart functionality creates an (anonymous) session should never do static caching.

### #3 - 2018-02-09 15:16 - Bjoern Jacob

- *Sprint Focus set to Remote Sprint*

### #4 - 2018-02-20 07:39 - Ralf Zimmermann

If you use the honeypot feature (enabled by default), some data will be stored within the session (only here uses ext: form session data). One solution could be to disable it.

Within your form definition:

```
type: Form
identifier: fooForm
label: 'foo'
renderingOptions:
  honeypot:
    enable: false
renderables:
  ...
```

or within your form setup

```
TYPO3:
  CMS:
    Form:
      prototypes:
        standard:
          formElementsDefinition:
            Form:
              renderingOptions:
                honeypot:
                  enable: false
```

[Bjoern Jacob](#) We should add a note into the docs.
