| Description | | | |
| Serializing is not clean at all and can potentially have security-implications. If we just want to store data we should use JSON for that. It would also make accessing/reading/... that data manually or by other scripts easier. As a migration-path let's create new columns for the json-data then and create a migration-script. | | | |

History

#1 - 2017-12-15 10:25 - Stephan Großberndt

- Subject changed from Move from tasks from serialized data to JSON to Move scheduler tasks from serialized data to JSON

#2 - 2018-04-30 12:38 - Susanne Moog

- Related to Task #84717: Reconsider serialized array for Linkvalidator added

#3 - 2018-09-24 14:12 - Dan Untenzu

This feature would also solve the issue, that it is not possible to migrate scheduler task with plain SQL commands -> see [#55548](#)

#4 - 2018-09-24 14:12 - Dan Untenzu

- Related to Bug #55548: Scheduler: Invalid task uid after Database duplication added

#5 - 2020-03-06 16:01 - Susanne Moog

- Tracker changed from Task to Feature

#6 - 2020-03-06 21:29 - Georg Ringer

- Related to Feature #4387: Provide a way to automatically install / set up a task upon installation of an extension added

#7 - 2020-03-23 21:04 - Georg Ringer

- Status changed from New to Closed

I am closing this issue in favor of [#4387](#). json can't be used in that case because the whole class is getting serialized to be waken up again.

This all needs a rewrite of scheduler extension which should be done with version 11. However you can already use <https://github.com/helhum/typo3-crontab> which works fine in 9
